Given static 2-D array as follow:

<code>int m[4][6]</code>

Solve:

What types of addresses of the following variables?

a) <code>m[1][3]</code>

b) <code>m[0]</code>

c) <code>m</code>

Answer:

a) <code>int *</code>

b) <code>int (*)[6]</code>

c) <code>int (*)[4][6]</code>

Write code to access <code>m[2][4]</code> without using operator <code>[]</code> .

<code>*((*(m + 2)) + 4)</code>
